

FSB Handmade

Bringing your designs to life

FSB made to measure: Rendering your wishes

FSB is a byword for functional perfection, outstanding design and top-quality materials engineered with the utmost of precision. The world of architecture is our home territory. Architects and designers have for decades deemed it a special honor to author door handles for us. Join with us in a world of virtually limitless opportunities and you, too, can put your wishes to practical effect.

The FSB product range is extremely comprehensive. Our new “FSB Handmade” Program now allows you to fulfil even those wishes that were previously unrealizable. You might, for instance, be after a lifting/sliding door handle to match components already fitted, need a product with bespoke modifications such as non-standard dimensions, or be looking to put a design idea of your own to effect. The upshot may be a one-off, or it may involve high production-run items for major projects. Facilitating this are unique processing skills ranging from hand-casting with a manufactory feel to fully automated series production of the highest quality.

Our factory in Brakel, Germany features departments housed together under a single roof, short carriage distances and speedier delivery create benefits for you from development through tool manufacture to production.

Our customers’ requirements and wishes are paramount to us. We will be pleased to offer individual advice. Before your product can be implemented it first needs to be visualized. Potential means are CAD data in the form of

- 3D data such as STEP or IGES
- 2D data such as DXF or DWG

You may have an idea that has yet to take on fully-fledged shape let alone have been formulated as CAD data. No problem: we will elaborate it in detail or else produce an initial draft to your conceptual specifications. Once it has undergone technical examination we will quote you for its implementation. If so desired, we will first manufacture a product sample so you can scrutinise your design. Once our own drawing has been endorsed we will immediately commence production – and before long you will have joined the ranks of those who have created original FSB products.

FSB offers you universal scope for designing the following product groups for all common door and window types:

- door levers
- knob handles
- window handles
- lifting/sliding door fittings
- frame-door fittings
- bespoke door-lever designs for glass-door fittings
- door pulls and push/pull pad handles (total length max. 500 mm)

For the past 135 years or more we have been designing and crafting our own designs. Now we can do the same for you in one of the following base metals:

- Stainless Steel
- Aluminium Bronze
- Bronze
- Brass

Invariably unique – whether one-off or serial. Whatever the type of premises involved – studio apartment, Wall Street office, or boutique hotel – you can put your product idea to effect with us and place yourself on an equal footing with luminaries such as Jasper Morrison, David Chipperfield or Christoph Ingenhoven. Virtually limitless diversity and design latitude!

New for old

FSB is at home in all settings and styles. Get together with us to develop products that inject fresh life into period structures. FSB lets you take full account of conservation issues when implementing your design.

Your measure of all things

Maybe you require a window handle of particularly large dimensions for an oversized façade door. No problem. We're more than happy to be measured by the diversity and quality of our customized solutions for special needs. (Fig: Design in Brass by Hopkins Architects, Mike Taylor)

Series design, material to order

We stock fittings in many designs, manufacturing them in materials that – as we see it – set them off rather well. We can produce each model in your preferred material and surface finish as you wish. You can choose between Aluminium, Stainless Steel, Bronze and Brass. (Fig: Design in Bronze by Fawad Kazi)

Help shape the FSB range

Taken together, our various hardware ranges are the perfect answer for all types of door and window in your building. Maybe you require a fitting for a special application that may not currently be found in our standard product range. That's no cause for compromise! We will manufacture the product to suit for you, thus guaranteeing a consistent fit-out for all the host surfaces involved.

Design follows architecture

However you go about it, your ideas will come to fruition with FSB, assuming they are technically feasible. Making a reality of just the right design for a given building or setting is, therefore, very much in your own hands.

Putting your ideas to material effect. We exclusively work high-quality, durable, proven metals that either retain their natural looks or are lastingly stained or coated. There are more than 20 standard combinations of materials and finishes to choose from but if they don't fit your vision we'll work with you to find the perfect match for your project.

Stainless Steel

- corrosion-resistant and easy-care
- high-quality nickel chromium steel, Material No. 1.4301 as per DIN 17440
- fine matt variant with unmistakably linear brushed effect
- in a polished variant as an environmentally conscious alternative
- impervious to bumps and scratches

Aluminum

- non-corroding lightweight metal with a long service life
- pure smelted alloys as per DIN 1725
- diverse stains and finish
